LOCKDOWN

BLACKTHORN MANOR

HANDLER'S MANUAL

> *One of you is locked inside.*
> *The other holds the only manual.*
> ***He is already in the house.***

THE GAME

LOCKDOWN is a two-player escape game played entirely by talking. Your partner, the **ESCAPEE**, is locked inside Blackthorn Manor and holds a phone. You are the **HANDLER**. You hold this manual. The phone shows the locked doors one at a time; this manual holds the rules that open them. You cannot see their screen and they cannot see your pages, so every answer has to travel through your voices.

THE ESCAPEE

- Holds the phone
- Sees the case code, the clock and the locks
- Describes exactly what is on screen
- Taps, cuts and flips on your instruction

THE HANDLER · YOU

- Holds this manual
- Never looks at the screen
- Asks questions, finds the rules
- Gives one clear instruction at a time

4	4:00	3
LOCKED DOORS	ON THE CLOCK	STRIKES AND HE FINDS YOU

Every wrong move is a **STRIKE**: **15 seconds** off the clock and he steps closer. Open all four doors before time or strikes run out and you escape.

HOW TO PLAY AS THE HANDLER

1. Ask your partner to read the **CASE CODE** aloud, as four fields. Write them in the margin.
2. Ask for the **PLATE NAME** on the lock in front of them. Find that page. The name must match exactly.
3. Follow the rules **top to bottom**. Ask the questions you need to answer them.
4. Give **one instruction at a time** and wait for them to say it is done.
5. When a door opens they read you a new plate name. Repeat until all four are open.

THE CASE CODE

LETTER	SERIAL	LAST	COLOR
K	**7**	**3**	**RED**

*Example: **K7-3-RED**. Rules always name the field they mean, so "SERIAL odd" is about the 7 and "LAST DIGIT odd" is about the 3. The worked examples in this manual all use this code. A new code is dealt every run, so never reuse an old answer.*

FIND YOUR PAGE

PLATE NAME	PAGE
BRASS TUMBLER	3
EXECUTION SWITCH	5
FUSE BOX	3
GAS VALVE	5
GLYPH PAD	4
IRON TUMBLER	3
NUMBER PAD	4
RELAY BOARD	5
VAULT WHEEL	4

AT A GLANCE

VOWEL LETTERS	A E
ODD DIGITS	1 3 5 7 9
EVEN DIGITS	2 4 6 8
COLORS	RED · BLUE YELLOW · WHITE

TALK LIKE A PRO

- Spell letters with a word: "B as in Bravo". B and D, M and N sound alike.
- Lost? Ask them to read the plate name again, slowly.
- Calm beats fast. A strike costs more time than a pause.

BRASS TUMBLER

He oiled these himself. They still stick.

Pins are numbered 1-5, **LEFT** to **RIGHT**. Tap them in the order below.

1. A pin showing the **SKULL** is set aside. It is picked **LAST**.
2. Count the **OTHER** pins whose color = the case code **COLOR**. Call it N.
3. **LAST DIGIT** odd: direction is **LEFT** to **RIGHT**. **LAST DIGIT** even: **RIGHT** to **LEFT**.
4. N = 0: pick all pins in direction order.

   N = 1: pick the **COLOR** pin first, then the rest in direction order.

   N = 2 or more: pick all **NON-COLOR** pins in direction order, then the **COLOR** pins in direction order.

WORKED EXAMPLE · case K7-3-RED

Pins left to right: 1 BLUE · 2 WHITE · 3 RED · 4 WHITE · 5 WHITE

Tap order: **3 → 1 → 2 → 4 → 5**

IRON TUMBLER

Cellar door. Rusted shut years ago.

Pins are numbered **RIGHT** to **LEFT**.

1. Count pins showing a **MOON**. Call it M.
2. M = 0: pick pins by color: **WHITE**, **YELLOW**, **BLUE**, **RED**.

   M = 1 or more: pick the **MOON** pins first, then the rest left to right.
3. **LAST DIGIT** 7 or more: reverse the whole order.

FUSE BOX

The wires hum. Cut the wrong one and he hears.

Wires are numbered 1-N from the **TOP**. A wire is **LABELED** if it has a word tag on it.

3 wires: any labeled wire -> cut the **TOPMOST** labeled wire. None -> cut wire 2.

4 wires: **LAST DIGIT** odd -> cut wire 4. Even -> cut the **TOPMOST** wire of the case **COLOR**; if none, cut wire 1.

5 wires: exactly **ONE** labeled wire -> cut it. Otherwise: **LETTER** is A or E -> cut wire 2; any other letter -> cut wire 5.

6 wires: **TWO** or more wires of the case **COLOR** -> cut the **SECOND** one from the top. Otherwise cut wire 3.

WORKED EXAMPLE · case K7-3-RED

Wires from the top: 1 WHITE (CRYPT) · 2 WHITE · 3 RED · 4 WHITE · 5 WHITE · 6 RED

Cut: **wire 6**

GLYPH PAD

The same marks, carved on every door.

The pad shows 4 glyphs. Find the **ONE** column below that contains all 4.

SERIAL DIGIT odd: press them in that column's order, **TOP** to **BOTTOM**.

SERIAL DIGIT even: press them in that column's order, **BOTTOM** to **TOP**.

Ignore glyphs of the column that are not on the pad.

COLUMNS · read from TOP

1	2	3	4	5	6
hand	tooth	skull	bat	crow	coffin
knife	spider	door	key	eye	hand
skull	eye	claw	skull	claw	spider
moon	web	candle	web	hand	crow
tooth	coffin	coffin	knife	door	moon
door	mask	eye	eye	bat	candle

WORKED EXAMPLE · case K7-3-RED

The pad shows: bat · key · eye · skull

Press in this order: bat · key · skull · eye

NUMBER PAD

The old safe. He never changed the numbers.

The pad shows 4 **NUMBERS**. Find the column below that holds all 4.

LETTER is a vowel: press smallest to largest.

Any other **LETTER**: press largest to smallest.

7 2 9 4 1 8 · 3 9 5 2 6 7 · 4 8 1 6 3 9 · 5 1 7 9 2 4

VAULT WHEEL

Wine cellar vault. The combination changed when he moved in.

The vault dial has numbers 0 to 50. Turn order is **RIGHT**, **LEFT**, **RIGHT**.

1. Clue order is determined by **LETTER**:

   Vowel (A, E): **RIGHT** clue first, then **CENTER**, then **LEFT**.

   Consonant: **LEFT** clue first, then **RIGHT**, then **CENTER**.

2. Look up base numbers in the secondary vault index.

3. If **SERIAL** is even, subtract **LAST** digit from each number.

4. Spin to each number in order and pull the release lever.

EXECUTION SWITCH

Six levers hang in the dark. Only one is safe, and only for a second.

The panel has 6 lettered switches. A countdown runs from 20 down to 0, then starts over.

1. Find the switch with the case code **LETTER** on it. That is your switch.
2. Start with the **COLOR** number: **RED** 2, **BLUE** 4, **YELLOW** 7, **WHITE** 10.
3. Add **SERIAL**. That is your countdown number.
4. Flip your switch while the countdown shows that number. The window is about one second. Wrong switch, too early or too late is a strike.

COLOR START NUMBER

COLOR	START
RED	**2**
BLUE	**4**
YELLOW	**7**
WHITE	**10**

WORKED EXAMPLE · case K7-3-RED

Switch letters, left to right: 1 F · 2 A · 3 K · 4 H · 5 B · 6 D

LETTER K is on switch **3**.

COLOR RED starts at **2**. Add SERIAL 7 = **9**.

Tell your partner: flip the **third** switch when the countdown shows **9**.

GAS VALVE

The boiler room. You will not need this.

Valves are lettered A to D, left to right.

1. **LETTER** is a vowel: turn A, C, B, D.

   Any other **LETTER**: turn D, B, C, A.
2. A valve with a **RED** handle is turned **FIRST**.

RELAY BOARD

The old relays still hum. They are not connected to anything.

Toggles are numbered I to IV from the **TOP**. One lamp glows above the board.

1. **LETTER** is a vowel (A, E): flip toggle II when the lamp is lit.

   Any other **LETTER**: flip toggle **III** when the lamp is lit.
2. If **SERIAL** is even, flip toggle I first.
